1. Sacramento Valley: Almonds, apricots, grapes, olives, peaches, pears, plums, prunes, walnuts.

2. Sierra Mountain: Apples, grapes, peaches, pears, plums.

3. North Coast: Apples, grapes, pears, prunes, walnuts.

4. Central Coast: Almonds, apples, apricots, cherries, grapes, pears, plums, prunes, walnuts.

5. San Joaquin Valley: Almonds, apricots, cherries, figs, grapes, lemons, nectarines, olives, oranges, peaches, persimmons, pistachios, plums, pomegranates, prunes, walnuts.

6. Southern California: Almonds, apples, apricots, avocados, dates, grapes, grapefruit, lemons, oranges, olives, walnuts.

CALIFORNIA FRUIT AND NUT STATISTICS

This bulletin contains preliminary estimates for 1982 and final 1981 California fruit and nut statistics. Final revisions for 1981 have been made based on review of marketing orders, recorded truck and rail movement, quantities used by processors, and other available check data. Estimates of production and prices for 1982 are preliminary and subject to revision after final data are received.

For comparative purposes, metric and short tonnage has been arranged side-by-side. Utilization and price data are shown in one table for ease of reading.

Explanatory "Notes for the Users" on page 1 provide general information regarding the data shown and covers special or unique factors pertaining to individual crop data.

Data presented in this publication are made possible by the voluntary cooperation of growers, fresh shippers, processors and other representatives of the California fruit and nut industry. Their cooperation is greatly appreciated.

Narrative: 1982 Crop 2

1 FRUIT AND NUT CROPS: Acreage, production and value, California, 1973-82 2

2 CALIFORNIA ALL FRUITS AND NUTS: Total acreage, production, and value by groups, 1981-82. 3

3 CALIFORNIA NONCITRUS FRUITS AND NUTS: Acreage, production, price and value, 1981-82. 4-5

4 CALIFORNIA NUTS: Acreage, production, price and value, 1981-82 . . 5

5 CALIFORNIA PISTACHIOS: Production sold in-shell; Sold shelled; Meat Production 5

6 CALIFORNIA NONCITRUS FRUITS AND NUTS: Utilized production and average grower return per ton, by utilization, 1981-82. 6-7

7 CALIFORNIA CITRUS FRUITS: Acreage, production, price and value, 1981-82 8

8 CALIFORNIA CITRUS FRUITS: Sales by utilization and average grower return per box, 1981-82. 9

9 CALIFORNIA CITRUS FRUITS: Average grower return per box, monthly and season average price, 1981-82 10

10 FIGS, DRIED: Production by variety, California, 1981-82. 11

11 RAISINS: Production by variety, California, 1981-82 2/ 11

12 OLIVES: Production by varieties, price 1/, and value, California, 1981-82 12

13 OLIVES: Quantity canned and price 2/, by variety, California, 1981-82 12

14 OLIVES: Other canning uses by style and price 2/, California, 1981-82 12

NOTES FOR USERS

1. PRODUCTION

Total production is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested, primarily for economic reasons.

Utilized production is the amount sold plus the quantities used at home. This production was formerly called production of value.

Economic abandonment is the difference between total and utilized production. This is the quantity of fruit not harvested for economic reasons or cullage of harvested fruit.

2. UTILIZATION

Utilization refers to first, not necessarily final, utilization for example, frozen fruit used for preserves is included as frozen.

Canned: Includes all canned products -- jam, jelly, baby food, nectar, juice, puree, and all fruit packs combined.

Dried: Tonnage published is the equivalent fresh tonnage weight for most fruits. Data acquired from dry yards and dehydrators provide the dried tonnage and the estimated drying ratio. The equivalent green tonnage used for drying is derived. The following table lists the tons of green fruit required to produce one dried ton.

YEAR	APPLES	APRICOTS	FIGS	RAISINS	FREESTONE PEACHES	PEARS	PRUNES
1981	10.0	6.9	3.0	4.0	8.5	5.0	3.15
1982	---	6.88	3.0	5.25	8.7	6.0	3.20

3. PRICE AND VALUE

a. Noncitrus Fruits and Nuts

Average grower return: The entire data series is based on the equivalent return at the first delivery point. The first delivery point price is defined as the price received by growers for fruit delivered at the local market, packinghouse, receiving station, or any other first delivery point.

Price and value: Prices are season averages computed on the basis of all methods of sale. Returns at the processing plant door for "processing" utilization and returns at the packinghouse door for "fresh market" utilization are weighted together to obtain the season average. Value estimates in this report cover the marketing season or crop year or years and should not be confused with cash receipts from these crops for a single calendar year. The season average price is applied to utilized production to compute value of production.

b. Citrus Fruits

Price and value, published as "grower return per box", are based on equivalent packinghouse door returns for the entire data series.

4. CITRUS AND AVOCADO CROP YEAR

Production for the crop year is from the bloom of the first year shown.

1982: VALUE UP, GRAPES REMAIN LEADER

The total value of California's 1982 fruit and nut crops is $2.95 billion, up 1.0 percent from the 1981 crop year and is exceeded only by the 1980 total value of $3.12 billion. Grapes accounted for over one-third of this estimate with $1.14 billion in total value.

California's total fruit and nut production is estimated at 11,485,650 tons, up 4.4 percent from the 1981 total. (The fresh weight equivalent of dried prunes is included for 1980 to present, therefore, all dried fruits are now represented by their fresh weight equivalent.) Total bearing acreage is the largest of record at 1,791,000 acres. The average per acre value is $1,646, down $10 from a year ago.

Untimely rainfall, winds and cool temperatures presented poor pollination conditions for most deciduous fruit and nut crops. This was followed by hail and then freezing temperatures that reduced the prospects for stone fruits and grapes in Fresno and Tulare counties. A summer of mixed temperatures that were overall cooler than normal, was followed by a wet, cool September that resulted in large losses of raisin and wine grapes. Grapes were late because of the slow start which made sugar levels slow in developing. Grapes with thin skins and tight bunches were in trouble with mildew and bunch rot when weather conditions did not clear up.

In spite of the occasionally poor weather conditions, several commodities reached record large production levels which include estimated losses. These crops were: all grapes, raisin grapes, wine grapes, kiwifruit, olives, pistachios, and walnuts. Record high total crop values were received for dates, table grapes, olives, plums, and pistachios. Record high bearing acres were reached for avocados, kiwifruit, nectarines, plums, pomegranates, almonds, and pistachios.

TABLE 1 -- FRUIT AND NUT CROPS: Acreage, production and value, California, 1973-82

Crop Year	Bearing Acreage	Total production	Average Value per acre 1/	Total Utilized Value 1/
	- Acres -	- Tons -	- Dollars -	- $1,000 -
1973	1,432,810	8,901,800	1,109 (1,099)	1,589,397 (1,574,572)
1974	1,505,540	8,607,650	987 (966)	1,485,888 (1,454,947)
1975	1,580,930	9,721,650	958 (942)	1,514,402 (1,488,790)
1976	1,639,625	9,626,600	979 (962)	1,604,645 (1,577,446)
1977	1,703,020	9,596,250	1,157 (1,137)	1,970,858 (1,936,510)
1978	1,730,320	9,182,600	1,351 (1,332)	2,337,140 (2,304,941)
1979	1,765,912	9,662,370	1,681 (1,664)	2,968,657 (2,938,151)
1980	1,768,650	11,720,440 2/	1,765 (1,745)	3,120,836 (3,086,340)
1981	1,763,340	11,001,550 2/	1,656 (1,638)	2,919,444 (2,888,925)
1982	1,791,000	11,485,650 2/	1,646 (1,633)	2,947,817 (2,924,129)

1/ Price and value estimates for citrus fruit are based on equivalent packinghouse door returns. Price and value estimates for noncitrus fruit and nuts are based on equivalent returns at the processing plant door for "processing" utilization and returns at first delivery point for "fresh market" utilization. Price and value estimates based entirely on returns at first delivery point are shown in parentheses for processing or dual fresh market-processing noncitrus fruit.

2/ Dried fruits are represented by their fresh weight equivalents.

TABLE 2 -- CALIFORNIA ALL FRUITS AND NUTS: Total acreage, production, and value by groups, 1981-82

Crop	Year	Bearing Acres	Production		Value of Production
			Metric Tons	Short Tons	$1,000
Deciduous Tree Fruits 1/	1981	266,370	2,292,100	2,526,650	548,556
	1982	267,130	1,952,600	2,152,400	497,399 6/
Grapes 2/	1981	592,080	3,622,000	3,993,000	1,207,145
	1982	611,300	5,405,000	5,958,000	1,141,190
Tree Nuts 3/	1981	527,810	395,800	436,250	562,069
	1982	533,250	380,300	419,250	614,395 6/
Semitropical Tree Fruits 4/	1981	111,460	310,800	342,650	142,966
	1982	116,500	325,700	359,000	199,410
Citrus Fruits 5/	1981	265,620	3,359,000	3,703,000	458,708
	1982	262,820	2,356,000	2,597,000	495,423
Total	1981	1,763,340	9,980,440	11,001,550	2,919,444
	1982	1,791,000	10,419,600	11,485,650	2,947,817

1/ Includes apples, apricots, cherries, kiwifruit, nectarines, peaches, pears, plums, pomegranates, and prunes.

2/ Includes raisin, table, and wine varieties.

3/ Includes almonds, pistachios, and walnuts. Includes almonds on a meat basis and pistachios and walnuts on an in-shell basis.

4/ Includes avocados, dates, figs, and olives.

5/ Includes grapefruit, lemons, oranges, tangerines, tangelos, and tangors. Tons are converted by multiplying production boxes by weights shown on page 6.

6/ Value for kiwifruit, prunes and walnuts was computed using 1981 prices.

TABLE 3 -- CALIFORNIA NONCITRUS FRUITS AND NUTS: Acreage, production, price and value, 1981-82

Crop	Year	Bearing Acres	Production			Value of Utilized Production		
			Total		Per Bearing Acre	Grower Return per Short Ton	Price per Short Ton	Total Value

FOREWORD

This is the thirty-ninth annual report on Dairy Industry statistics issued by the California Crop and Livestock Reporting Service. It contains, for the year 1982, a summary of statistical data which was originally published monthly in the "Dairy Information Bulletin". Comparative figures for earlier years, and selected special reports relating to the Dairy Industry are also presented. All changes from previously published data represent either corrections of errors or revisions based on receipt of more complete information.

Most of the statistical data contained in this bulletin are based on reports filed by individuals and firms engaged in the production, manufacture, and distribution of milk and dairy products in California. Although it is not possible to list all of these reporters individually, their cooperation is acknowledged with appreciation.

Data pertaining to the United States and to states other than California were secured from various reports of the United States Department of Agriculture. Estimates of the population of California were obtained from reports of the California Department of Finance.

The invaluable assistance of the personnel of the Bureau of Milk Stabilization, Division of Marketing Services of the California Department of Food and Agriculture, in the compilation, organization, and presentation of data for this report is gratefully appreciated.

MILK COWS ON FARMS, AVERAGE PRODUCTION PER MILK COW, TOTAL PRODUCTION ON FARMS, AND CASH RECEIPTS FROM MARKETINGS

On January 1, 1983, there were an estimated 940 thousand milk cows and heifers that had calved on farms in California. This was one thousand less than were estimated for January 1, 1982. The estimated number of cows milked during the year 1982 was 940 thousand. This compares with an average of 923 thousand head milked during the year 1981.

The average production of milk per cow in California during 1982 was 15,446 pounds. This was nine pounds more than 1981. Total milk production during 1982 was 14,518 million pounds, 1.9 percent more than was produced during 1981.

Cash receipts from farm marketings of milk and cream in California during 1982 totaled approximately 1,941 million dollars. The comparable figure for 1981 was 1,943 million dollars. Lower prices paid for the increased production were responsible for the decrease in total cash receipts.

As of January 1, 1983, there was an estimated total of 11,055 thousand milk cows and heifers that had calved on farms throughout the United States. This was 32 thousand head or 0.3 percent more than the number estimated for January 1, 1982. The average number of cows milked during the year 1982 was 11,026 thousand head. This was 103 thousand head more than the average for 1981.

The average production of milk per cow in the United States during 1982 was 12,316 pounds. This was 139 pounds above the 1981 figure and established a new record high in production per cow. Total milk production during 1982 was 135,795 million pounds, 2,782 million pounds more than in 1981.

Cash receipts from marketings of milk and cream in the United States during 1982 totaled approximately 18,274 million dollars. The comparable figure for 1981 was 18,128 million dollars.

TABLE 1. ESTIMATED NUMBER OF MILK COWS ON FARMS, AVERAGE PRODUCTION PER MILK COW, TOTAL PRODUCTION ON FARMS, AND CASH RECEIPTS FROM FARM MARKETINGS OF DAIRY PRODUCTS, CALIFORNIA, 1964-1982

1981	910	923	15,437	554	14,248	512	1,943,229
1982	941	940	15,446	561	14,518	527	1,941,234
1983	939						

1/ Prior to January 1, 1970, milk cows and heifers, two years old or older.

2/ All milk and cream.

California accounted for 10.7 percent of the milk produced in the United States during 1982 and received 10.6 percent of the cash receipts from farm marketings of milk and cream. California ranked second among the states in the average number of milk cows on farms during 1982. It ranked first in production of milk per cow; second in total milk production; and second in cash receipts from farm marketings of milk and cream. Wisconsin had more cows, produced more milk, and received more from farm marketings of milk and cream than did California.

Estimates of the number of milk cows and heifers that had calved on farms by county and by crop reporting district in California at the beginning of 1982 and of 1983 are given in Table 4. Of the total of 940 thousand head on farms in the State on January 1, 1983, approximately 56 percent were in the San Joaquin Valley, 30 percent in Southern California, and 7 percent in the Central Coast counties. The five leading counties were San Bernardino, Tulare, Stanislaus, Riverside, and Merced.. Together these counties accounted for about 61.0 percent of all the milk cows in the state.

TABLE 2. ESTIMATED NUMBER OF MILK COWS ON FARMS, AVERAGE PRODUCTION PER MILK COW, TOTAL PRODUCTION ON FARMS, AND CASH RECEIPTS FROM FARM MARKETINGS OF DAIRY PRODUCTS, UNITED STATES, 1964-1982

COMMERCIAL PRODUCTION

Approximately 14,467 million pounds of milk were produced commercially in California during 1982. Of this amount, 13,901 million pounds were received as market grade milk and 566 million pounds were received as manufacturing grade milk. Between 1981 and 1982, the total commercial production increased 2.0 percent. Production of market grade milk increased 1.7 percent while the production of manufacturing grade milk was up 9.0 percent. Market grade milk accounted for 96.1 percent of all commercial production in 1982 compared to 96.3 percent in 1981 and 89.0 percent ten years earlier (1972).

The average milk fat content of all milk received at plants from producers in California during 1982, was 3.63 percent. That received as market milk contained an average of 3.63 percent milk fat while that received as manufacturing grade milk contained an average of 3.70 percent milk fat.

The commercial production of all milk fat in California during 1982 amounted to approximately 525 million pounds, 3.0 percent more than was produced during 1981. Market milk fat amounted to 96.0 percent of production in 1982 compared to 96.2 percent in 1981. Between 1981 and 1982, the production of market milk fat rose 2.8 percent, while that of manufacturing milk fat increased 9.4 percent.

The San Joaquin Valley accounted for 55.8 percent of all milk produced commercially in the State during 1982. It accounted for 55.3 percent of the market milk and 67.0 percent of the manufacturing milk. Approximately 31.2 percent of all milk and 32.3 percent of the market milk was produced in Southern California. The five leading counties in market milk production in the order of their importance during 1982 were: San Bernardino, Tulare, Riverside, Stanislaus, and Merced. These five counties accounted for 62.3 percent of the State's total production of market milk. The five leading counties in manufacturing milk production were: Stanislaus, Merced, Humboldt, Glenn, and San Joaquin. These counties accounted for 82.3 percent of the State's total of manufacturing milk production. The five leading counties in total milk production were: San Bernardino, Tulare, Stanislaus, Merced, and Riverside. They accounted for 62.2 percent of the State's total production during 1982.

AVERAGE PRICES PAID PRODUCERS

The California Crop and Livestock Reporting Service estimates the prices received by producers for many crops, livestock, and livestock products. The livestock products include whole milk sold in wholesale quantities. Table 13 contains the estimated monthly prices received by producers in California for the period 1972 through 1982. Data for earlier years are available in other publications and have been published in previous annual California Dairy Industry Statistics.

The average prices paid monthly to producers in California for market milk and for manufacturing milk from 1972 through 1982, are presented in Tables 14 and 15. Prices paid for market milk in Table 14 reflect the changing proportions of the product paid for in accordance with class use, as well as varying price levels for products with the same usage. Prices paid for manufacturing milk in Table 15 reflect primarily changes in price levels. Each price series is affected to some extent by variation in the average milk fat content of milk purchased from producers. Prices are presented for the average test of the milk actually purchased each month from producers.

UTILIZATION OF COMMERCIAL PRODUCTION

During 1982, approximately 30.7 percent of the total milk fat produced commercially in California was used in fluid market milk. Fluid market milk currently includes fluid whole milk, fluid lowfat milk, fluid skim milk, and yogurt. Fluid half-and-half used 1.7 percent of the milk fat; butter, 31.2 percent; cheese (including cottage cheese), 13.6 percent; condensed and evaporated milk products, 3.0 percent; frozen dairy products, 10.8 percent; and all other manufactured products, 9.0 percent. Approximately 32.4 percent of the total milk fat was used in fluid market milk products and the remaining 67.6 percent was used in manufactured products.

Approximately 43.7 percent of the market grade milk produced in 1982 was used in Class I fluid market milk products and 6.5 percent was used in manufactured products where market grade milk was mandatory. The remaining 49.8 percent was used in making all other kinds of manufactured products.

1/ Approximately 0.34 pound of creaming mixture is added to each pound of curd in the creaming process.

2/ 7.14 pounds of skim milk are required to make one pound of dry curd.

3/ Creaming mixture for creamed cottage cheese tests 14.5%.

4/ Creaming mixture for lowfat cottage cheese tests 5.5%.

1/ The skim milk available for manufacturing purposes in California is Total Commercial Skim Milk Production excluding Market Milk Class 1 and Mandatory Class 2 Skim Milk Usage.

SALES OF CLASS 1 MARKET MILK PRODUCTS

Total sales of Class 1 market milk products in California during 1982 amounted to approximately 707.3 million gallons. This included 640.5 million gallons of fluid milk (whole milk and lowfat milk) 42.4 million gallons of fluid skim milk; 9.7 million gallons of half-and-half; and 14.7 million gallons of yogurt and miscellaneous Class 1 products. The sales of fluid milk included 15.3 million gallons to the Federal Government and 625.1 million gallons to the civilian trade.

Beginning January 1974, changes were made in the usage classification of several products made with market grade milk. The changes which are reflected in this section are as follows: (1) The product called flavored dairy drink was replaced by flavored lowfat milk, and flavored nonfat milk (tabulated as components of lowfat milk sales, and fluid skim milk sales, respectively); (2) all fluid cream items except half-and-half became Class 2 usage items; and (3) yogurt sales plus sales of the Class 1 skim portion of imitation milk products have been tabulated as part of Class 1 sales. Because of these changes, valid comparisons can be made between 1981 Class 1 sales and Class 1 sales for years prior to 1974 are difficult.

Between 1981 and 1982, total Class 1 sales were down 1.7 percent. Sales of fluid milk dropped 1.6 percent; sales of fluid skim milk, declined 3.9 percent; and sales of fluid half-and-half were up 0.5 percent.

A summary of fluid milk sales by type of trade in California for the years 1965 through 1982 is presented in Table 36. During 1982, sales of fluid milk to the wholesale trade (stores, restaurants, schools, hospitals, etc.) by distributors on their own routes represented 85.2 percent of total sales; sales by distributors on their own routes to retail customers accounted for 0.3 percent; sales to retail customers cash-and-carry at ranch and/or processing plant, 0.7 percent; sales to subdistributors or peddlers for resale to the trade, 11.4 percent; and sales to the Federal Government, 2.4 percent.

MANUFACTURE OF DAIRY PRODUCTS

Approximately 202.7 million pounds of butter were manufactured in California during 1982. This was 5.4 percent more than 1981 and 80.4 percent more than the amount produced 10 years earlier in 1972.

The total manufacture of cheese, other than cottage cheese, in California during 1982 was approximately 250.2 million pounds. This production was 18.8 percent more than in 1981 and almost 10 times the amount produced 10 years earlier. Of the cheese manufactured in 1982 approximately 138.1 million pounds were whole-milk varieties and 112.2 million pounds were part-skim and full-skim varieties. Between 1981 and 1982, the manufacture of whole-milk cheese increased 28.8 percent and the manufacture of part-skim and full-skim cheese rose 8.4 percent. Table 46 presents the annual manufacture of cheese in California by major varieties for 1972 through 1982.

During 1982, approximately 88.1 million pounds of dry curd cottage cheese were manufactured in California. The addition of creaming mixtures to this curd resulted in an output of 85.3 million pounds of cottage cheese and 49.3 million pounds of lowfat cottage cheese. The approximate combined total of 134.6 million pounds manufactured represents cottage cheese in the form in which most of it is consumed. Between 1981 and 1982, the manufacture of cottage cheese and lowfat cottage cheese combined decreased approximately 5.9 percent. The manufacture of lowfat cottage cheese decreased 3.9 percent while the manufacture of cottage cheese decreased 7.0 percent.

During 1982 approximately 145.1 million pounds of bulk unsweetened condensed skim milk were manufactured. This was 18.0 percent more than was manufactured during 1981.

During 1982 approximately 279.6 million pounds of nonfat-dry-milk for human consumption and 1.9 million pounds of nonfat-dry-milk for animal feed were manufactured in California. This was an increase of 6.2 percent from 1981 for nonfat-dry-milk for human consumption and a decrease of 2.7 percent for nonfat-dry-milk for animal feed.

Approximately 9.7 million gallons of fluid buttermilk were manufactured in California during 1982. This was 8.0 percent less than the output during 1981.

The manufacture of frozen dairy products in California during 1982 included approximately 95.2 million gallons of ice cream; 27.7 million gallons of ice milk; 4.7 million gallons of sherbet; 0.6 million gallons of imitation ice cream; and 0.5 million gallons of imitation ice milk. The approximate total of 128.9 million gallons was 0.3 percent less than that manufactured during 1981. The above figures do not include approximately 3.2 million gallons of frozen yogurt manufactured in California in 1982. From 1981 to 1982 the manufacture of ice cream rose 1.1 percent. During the same period the manufacture of ice milk decreased 2.3 percent, the manufacture of sherbet decreased 4.1 percent, the manufacture of imitation ice cream dropped 36.3 percent, and the manufacture of imitation ice milk was down 31.8 percent.

CONSUMPTION AND MANUFACTURE PER CAPITA OF DAIRY PRODUCTS

The population of California on July 1, 1982, was estimated by the California Department of Finance to be 24,724,000. This represented an increase of 528 thousand persons or approximately 2.2 percent from the same date a year earlier.

Although no data are collected which directly relate to the consumption of dairy products in California, the quantities of some dairy products either sold or manufactured in California represent reasonably well the quantities consumed in the State. These are products which for the most part are neither imported nor exported in significant amounts and which are not storable for any extended period of time. Products that have these characteristics and for which sales data are available are: fluid milk, fluid skim milk, half-and-half, yogurt, and miscellaneous Class 1 products. The quantities of manufactured products produced in this State which may be assumed to represent those consumed here, are limited to cottage cheese, buttermilk, and frozen products.

The sales of various dairy products and the manufacture of selected manufactured dairy products are expressed in either quarts per capita or pounds per capita in Table 62. Population figures used are those shown in the first column of the Table.

Per capita sales of all Class 1 dairy products in California during 1982 amounted to 114.43 quarts. These 114.43 quarts included: 103.62 quarts of fluid milk, 6.86 quarts of skim milk, 1.57 quarts of half-and-half, and 2.37 quarts of yogurt and miscellaneous Class 1 products. Valid comparisons of the per capita sales of these items for 1974 and later cannot be made with data for 1973 and earlier due to product reclassifications and changes in reporting procedures. For example, fluid creams are no longer Class 1 products while yogurt is a Class 1 product. Flavored dairy drinks are now included with either fluid milk or fluid skim milk, depending on the fat content.

In 1982 manufacture per capita of creamed and lowfat cottage cheese in California totaled 5.44 pounds, a decrease of 8.0 percent from 1981. Creamed cottage cheese accounted for 3.45 pounds per capita, and lowfat cottage cheese accounted for 1.99 pounds per capita. Between 1981 and 1982, the manufacture per capita of creamed cottage cheese decreased 9.0 percent and the manufacture per capita of lowfat cottage cheese decreased 6.1 percent.

During 1982, the manufacture per capita of buttermilk in California amounted to 1.57 quarts. This was 10.3 percent less than the manufacture per capita during 1981.

Manufacture per capita of all frozen products in California during 1982 totaled 20.85 quarts, a decrease from 1981 of 2.4 percent. The manufacture per capita of all frozen products included 15.41 quarts of ice cream, 4.49 quarts of ice milk, 0.77 quarts of sherbet, 0.10 quarts of imitation ice cream, and 0.09 quarts of imitation ice milk. Between 1981 and 1982 the manufacture per capita of the various frozen dairy products showed the following percentage decreases: ice cream 1.0, ice milk 4.3, sherbet 6.1, imitation ice cream 37.5, and imitation ice milk 30.8.

1982	5.44	3.45	1.99	1.57	20.85	15.41	4.49	0.77	0.10	0.09

1/ Subsequent to 1973, flavored dairy drink sales have been categorized as either flavored fluid milk or flavored fluid skim milk sales depending on fat content.

2/ Subsequent to 1975, out-of-state yogurt sales have been excluded from Class 1 product sales.

3/ Subsequent to 1973, fluid cream sales have been excluded from Class 1 product sales.

MINIMUM PRICES

As specified in Division 21, Part 3, Chapter 2 of the Food and Agricultural Code of the State of California, the Bureau of Milk Stabilization establishes minimum prices to be paid to producers by handlers for market milk in the various usage classifications for each marketing area in the State.

Commencing August 1, 1978, minimum Class I prices were established by means of an economic formula. The factors used in the formula and their respective weights have been as follows: Cost of production, 43%; Class 4 price, 42%; and real net spendable earnings as published by the Employment Development Department for the Los Angeles-Long Beach metropolitan area, 15%. Effective August 1, 1982 the real net spendable earnings factor was permanently replaced by an average weekly earnings factor. This change in the formula was made because of the unavailability of the real net spendable earnings factor. The formula-determined Class I prices are calculated bimonthly by the Bureau of Milk Stabilization and are subject to change as a result of hearings.

Minimum class prices in effect during 1982 are shown in Tables 63 through 66.

1/ Prices have been calculated from the price information presented in Tables 64 and 65 on a f.o.b. Distributor's Plant basis for 3.5 percent butterfat and 8.7 percent solids-not-fat milk.

2/ Effective August 1, 1982 the Class 4 price was converted into a Class 4a and a Class 4b price.

SALES OF MARKET WHOLE MILK AND LOWFAT MILK BY SIZE AND TYPE OF CONTAINER, AND BY TYPE OF TRADE

In October 1982, all market milk distributors in California were requested to complete a special one-page form relating to their sales of market whole milk and lowfat milk by size and type of container and by type of trade. A similar survey for the month of October has been made each year since 1951.

Table 67 contains summary tabulations of the data reported on the special survey forms for October 1982. In this table, all sales are expressed in gallon units. For example, sales in quarts represent the number of gallons (expressed as quart units) sold rather than the number of quarts sold. This results in greater comparability and facilitates the computation of percentage distributions.

Sales by type of trade were reported under the headings of wholesale, retail, cash-and-carry, peddler and Federal Government. Since some routes, particularly for the smaller distributors and some of the peddlers, were probably "combination" routes, it seems likely that all sales are not properly classified as to type of trade. However, this factor is so small that it does not appear to have had any significant effect upon the overall results.

Users of these data should note that the survey summaries *do not include all sales of fluid milk in California.* For the State as a whole, the sales as reported in the summaries, account for a sample of approximately 96.1 percent of all market whole milk and lowfat milk sales in California.

PLANTS REPORTING SALES OF FLUID MARKET MILK

The number of plants reporting sales of fluid market milk during the month of December by county of plant location for the years 1973 through 1982 is shown in Table 68. During this ten year period, the number of plants has decreased from 236 in 1973 to 88 in 1982, a decline of 62.7 percent.

CALIFORNIA AGRICULTURE

(Statistical Review for 1982)

California again led the Nation in gross cash farm receipts in 1982 for the 35th consecutive year. An estimated $14.3 billion was paid to the State's farmers in 1982 for 51.8 million tons of farm products. Increased receipts for fruits, nuts, and vegetables more than offset declines for field crops, while total receipts for livestock and livestock products were near last year's level.

Overall crop production in 1982 was down 3 percent from 1981 but gross cash receipts were up 2 percent. In spite of lower prices for many farm commodities in 1982, net farm income is expected to show very little change since many producers reduced major expenditures, particularly for new equipment; fuel costs also moderated and interest rates declined late in the year. Record 1982 harvests were recorded for corn (for grain and for silage), grapes, olives, pistachios, kiwis, walnuts (equal to 1981), broccoli, summer onions, and strawberries. Milk production reached a record 14.6 billion pounds. California is the Nation's leader in production per cow and second in total production.

Producers of broilers also set new production records. Lower prices for cattle, eggs, turkeys, and nearly all field crops reduced the income of many farmers.

The 1982 crop production was composed of 26.7 million tons of field crops, 13.5 million tons of vegetables, and 11.5 million tons of fruits and nuts.

FIELD CROPS: California's 1982 field crop production was 26,749,000 tons. This is 12 percent below the record high 30,480,000 tons produced last year. Record large crops of corn for grain and corn silage were produced in 1982. Sorghum grain production was above last year. Increases in these crops were more than offset by production declines in all other field crops estimated. Average value per acre of production declined to $492. This is 4 percent below the $510 per acre value of 1981 production and 17 percent below the record high $593 dollars for 1980.

FRUIT AND NUT CROPS: The total value of California's 1982 fruit and nut crops is $2.95 billion, up 1.0 percent from the 1981 crop year and is exceeded only by the 1980 total value of $3.12 billion. Grapes accounted for over one-third of this estimate with $1.14 billion in total value.

California's total fruit and nut production is estimated at 11,486,650 tons, up 4.4 percent from the 1981 total. (The fresh weight equivalent of dried prunes is included for 1980 to present, therefore, all dried fruits are now represented by their fresh weight equivalent.) Total bearing acreage is the largest of record at 1,812,330 acres. The average per acre value is $1,646, down $10 from a year ago.

Untimely rainfall, winds, and cool temperatures presented poor pollination conditions for most deciduous fruit and nut crops. This was followed by hail and then freezing temperatures that reduced the prospects for stone fruits and grapes in Fresno and Tulare counties. A summer of mixed temperatures that were overall cooler than normal, was followed by a wet, cool September that resulted in large losses of raisin and wine grapes. Grapes were late because of the slow start which made sugar level slow in developing. Grapes with thin skins and tight bunches were in trouble with mildew and bunch rot when weather conditions did not clear up.

In spite of the occasionally poor weather conditions, several commodities reached record large production levels which include estimated losses. These crops were: all grapes, raisin grapes, wine grapes, kiwifruit, olives, pistachios, and walnuts. Record high total crop values were received for dates, table grapes, olives, plums, and pistachios. Record high bearing acres were reached for avocados, kiwifruit, nectarines, plums, pomegranates, almonds, and pistachios.

VEGETABLE CROPS: California produced 13.5 million tons of vegetables from 935,697 acres in 1982, up 13 percent from the 12 million tons produced in 1981. Value of production for 1982, at $2.78 billion, increased 9 percent from 1981's value of $2.56 billion. California's harvested vegetable acreage, at 935,697 acres, increased 8 percent from the 869,320 acres harvested in 1981.

Processing tomatoes contributed heavily to the increased acreage. Acreage increases for broccoli, cantaloup, cauliflower, and honeydews. Summer onions were also notable. Reduced acreage for chili peppers and lettuce were partially offsetting.

The increase in production is attributed almost entirely to processing tomatoes which recovered from a short crop in 1981. Broccoli, carrots, summer onions, and strawberries also had a larger production than last year. Lettuce and chili peppers were the only two crops with substantially less production than last year.

Season average prices for 1982 were slightly lower than in 1981 for a number of crops. Two exceptions were mushrooms and strawberries. Average value of production per acre was $2,967 compared to $2,939 per acre in 1981 with the increase attributed mostly to processing tomatoes.

New records were set for broccoli acreage, production, and value. Strawberries and cauliflower set records for acreage harvested and value of production. Celery, honeydews, and summer onions had record acreages harvested and summer onions showed a record production.

LIVESTOCK AND DAIRY: There were 4.9 million cattle and calves on California farms and ranches on January 1, 1983. Beef producers trimmed their cow herd by 11 percent after making two strong yearly increases. Dairy cow numbers stabilized at a record high level but producers continued to retain a large inventory of dairy replacement heifers. The number of sheep and lambs on farms January 1, 1983 declined to 1.1 million head, the first decrease in 6 years. The number of hogs and pigs on December 1, 1982 totaled 160,000 head, the same as the previous year. Cash receipts from farm marketings of meat animals during 1982 were $1,562 million, while 1982 receipts of milk and cream were $1,942 million.

POULTRY: California egg production totaled 8.288 billion eggs during 1982, a 1 percent decrease from the previous year. Production of broiler and fryer chickens totaled 167 million birds, a 5 percent increase over 1981 totals. California turkey production decreased 8 percent with a total of 20 million birds raised during 1982. Cash receipts from farm marketings of eggs in 1982 were $363 million, broilers $260 million, and turkeys $158 million.

CALIFORNIA FIRSTS

Some 200 crops are recognized in California, including seeds, flowers, and ornamentals. This report contains information for 58 major crops grown on a large commercial scale in California -- 13 field crops, 22 fruits and nuts, and 23 vegetables. In addition, data are shown for 9 livestock and poultry products.

The table below lists 48 commercial crop and livestock commodities in which California leads the Nation. A large number are specialty crops in which the Golden State accounts for most of the U.S. production.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.
2/ Based on value of quantity of harvested for crops and on value of quantity marketed for livestock and poultry products.
3/ Share of U.S. production based on 1978 Census of Agriculture.
4/ Extracted from Agricultural Commissioners' annual reports.
5/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.
6/ Includes trees, shrubs, vines, bulbs, turf, and cut Christmas trees, etc., not included in flowers and foliage category.
7/ Millions of eggs.
8/ Not available.
9/ The 1982 price and value are based on U.S. average price.
10/ Value of production based on 1981 price.
11/ Miscellaneous vegetables cover a number of other vegetable crops not published separately. Some of the crops included in this group are green onions, Oriental vegetables, parsley, pumpkins, radishes, squash, etc.

STATE COMMODITY RANKING: California's "Top Twenty" crop and livestock commodities account for about 78 percent of the State's gross farm income. In 1982, dairy products, cattle and calves, and eggs continued to dominate the livestock industry, while grapes, cotton, hay, nursery products, lettuce, and processing tomatoes were the most important crops.

California agriculture is considered one of the most diversified in the world, with no one crop dominating the State's farm economy. This is illustrated by the fact that most crops individually account for less than 2 percent of the State's total gross farm income. California leads the Nation by a wide margin in the production of fruits and nuts and vegetables. California accounts for 50 percent of the Nation's cash receipts for fruits and nuts, while for vegetables, its share is about one-third.

Ranking and Value, 20 Leading Farm Products, California, 1981-82

Farm Product	Commodity Ranking		Value 1/		Percentage of State Total	
	1981	1982	1981	1982	1981	1982

1/ Based on value of quantity harvested for crops and on value of quantity marketed for livestock and poultry products.

PRINCIPAL GROUPINGS: The combined acreage of principal crops in 1982 totaled 9.25 million acres, 5 percent below the acres harvested in 1981. Gains occurred in vegetables and melons (8 percent), and fruit and nut crops (3 percent), while field crops decreased (8 percent). California's harvested farm production in 1982 was 51.8 million tons, off 3 percent from 1981's 53.5 million tons.

Acreage and Production by Principal Groupings for California, 1980-82

Production	1980	27,699,000	11,720,440	12,441,750	51,861,190
	1981	30,480,000	11,001,550	12,018,450	53,500,000
	1982	26,749,000	11,488,650	13,527,550	51,765,200

NUMBER OF FARMS AND INVESTMENTS: California, which is the second largest state in the conterminous United States with a land area of 100.2 million acres, had an estimated 33.7 million acres in farms in 1982. California farmers produced about 10 percent of the national gross cash receipts from farming in 1982. This production was realized from 80,000 farms, or 3 percent of the Nation's total (based on the definition of places with annual sales of agricultural products of $1,000 or more.)

The average California farm was estimated at 421 acres in 1982, valued at $775,600 including buildings. Nationally, the average farm size in 1982 was 433 acres and valued at $337,700 including buildings.

LAND VALUES: The State average value per acre as of February 1, 1983 was $1,925, up from the $1,905 recorded in 1982. This compared with the average U.S. value of $744 in 1983 and $789 in 1982. The following tables summarize average market values per acre for specified use of California farmlands by major districts.

Average Value of Land Per Acre By District, California-February 1, 1982-83

1/ Old definition of farm: Places of 10 or more acres that had annual sales of agricultural products of $50 or more and places of less than 10 acres that has annual sales of $250 or more.

2/ New definition of farm: Places with annual sales of agricultural products of $1,000 or more.

3/ Preliminary.

EXPORTS

Exports of California's agricultural products declined 21 percent in 1982, the first year since this series of estimates began in 1975 that a decrease has been recorded. Most notable among declining export commodities was rice with a 65 percent drop in value of exports from 1981 to 1982.

Commodities showing increases in exports over 1981 were beef cattle and products (including meat, tallow, and hides), lettuce, strawberries, celery, and broccoli, the latter four reflect a generally good vegetable year and rising exports to Canada and Pacific Rim markets.

Most California commodities followed the national trend of declining agricultural exports brought about by the strengthening of the dollar abroad that makes our products more expensive and the general economic slowdown that has reduced purchases in all areas but especially in higher priced luxury foods and products. Growing competition in the EEC markets has also been a factor.

Cotton continues to be our leading agricultural export with grapes (including table, raisin, wine, juice, and canned) moving up into second place in 1982. Almonds, wheat, and oranges also continue to be export leaders while rice fell from second to sixth place.

ESTIMATED VALUE OF CALIFORNIA'S LEADING AGRICULTURAL EXPORTS
VALUED AT PORT OF EXPORTATION, CALENDAR YEAR, 1982

Rank	Commodity Group	Value	Change from 1981	Farm Level Export Value as % of Value of Production

DATA INCLUSIONS AND LIMITATIONS: Data sources often differ in what is included or excluded. The following are guidelines for the data used in this report. The fact that various export studies report different numbers is often explained by whether or not it includes or excludes some of the following items or trade patterns.

1. Shipments between the 50 states, Puerto Rico, and U.S. island possessions (Virgin Islands, Guam, etc.) are excluded from the data on which this report is based.

2. Shipments in transit from one country to another through the U.S. are excluded.

3. Shipments to U.S. Armed Forces and Diplomatic Missions abroad for their own use are excluded.

4. Shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act) and P.L. 87-195 (Act for International Development) are included.

5. Agricultural commodities covered in this report consist of nonmarine food products and agricultural products that have not passed through complex manufacturing processes. Raw hides and skins, vegetable and animal fats and oils, and unrefined wines are included. Such manufactured items as textiles, leather, boots and shoes, baked goods, and distilled alcoholic beverages are not included.

6. Both the California Crop and Livestock Reporting Service and the U.S. Department of Commerce are constantly updating and revising data. The most recent available revision was used at the time of the assembly of this report, April-June 1983.

INFORMATION SOURCES: The following is a list of major sources used in this report.

U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division data series EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation, available on magnetic computer tape.

U.S. Department of Agriculture, Economic Research Service, 1982.

U.S. Department of Agriculture, Statistical Reporting Service, Foreign Agricultural Trade of the United States, especially the March/April 1983 issue.

Agriculture Canada. Annual Unload Report -- Fresh Fruits and Vegetables on 12 Canadian Markets.

U.S. Department of Agriculture publications: Foreign Agriculture, U.S.D.A. News Weekly Round-up of World Economic Conditions in Relation to Agricultural Trade, Agricultural Outlook, and periodic releases of the Crop Reporting Board.

Federal/State Market News Service Publications. Frequent market reports sometimes include exported commodities.

Marketing Organizations and Individuals. Many people supplied opinions and information about the commodities with which they are professionally involved. We wish to thank all those who contributed their expertise.

INTRODUCTION: This 1982 estimate of California's agricultural exports is being published in two sections: (1) the Annual Bulletin and (2) a Statistical Appendix. This makes Tables 1-5 of the export report available separately from the Statistical Appendix that contains tables of commodity shipments by country of destination and tables showing all agricultural commodities shipped to selected countries.

Using a calendar year basis complicates comparisons of exports to crop data with varying crop or marketing year cut-off dates. Where crops are harvested late in the year and marketed throughout the following year (e.g., cotton, almonds), the comparisons shown are with the production of the preceding year. Please note footnotes to Table 3 to ascertain whether this delayed comparison system has been used.

The comparisons of both California and U.S. crop values to exports in Table 3 are calculated using average farm level prices at the state and national level. Since exported produce is often of higher than average quality and may represent off-season high value produce in some categories, the use of average prices probably underestimates the value of the exported portion of the crop.

Farm values and quantities used to compare exports to the total crop were taken from existing publications of the California Crop and Livestock Reporting Service and the U.S. Department of Agriculture's Statistical Reporting Service published material. Conversion of commodities from export form to farm production units was done using Statistical Bulletin No. 362, Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products. Table 5 comparisons between California and U.S. total exports are done solely on export values.

The Statistical Appendix containing Tables 6 and 7 is published separately from the current bulletin. In the commodity by country tables, both U.S. and California port data are shown for most agricultural commodities that appear in Table 5. In Table 7, selected U.S. agricultural exports, the portion moving through California port districts, and a separation between sea and air shipments are shown by country. The 25 leading markets for U.S. agricultural products are included.

The final estimates of California's agricultural exports in this bulletin were made using the port data, information from the Canadian government on unloads of fresh fruits and vegetables, and by contacting representatives of commodity groups, exporters, and handlers to obtain their opinions. Each commodity was treated separately and the estimate was made on the best available information. It should be emphasized that these are estimates since exact data are not available.

HIGHLIGHTS OF CALIFORNIA'S AGRICULTURAL EXPORTS
CALENDAR YEAR 1982

Table 1

California's agricultural exports declined to $3.3 billion in value during 1982, a 21% drop from 1981. This is the first year since this series began in 1975 that a decrease has occurred. The percentage loss was greater than the national trend due to an abnormal curtailment of rice sales to Korea that reduced California's rice exports by 65%. Almonds and wheat also recorded significant declines of 23% and 31%, respectively -- a result of several factors including a stronger dollar that makes U.S. exports more expensive, the slowing of economic activities throughout the world, and increasing competition from other suppliers.

Most prominent among the explanations of the export decline is the strong U.S. dollar, calculated to be "overvalued by 20 percent or more in relation to the currencies of its main trading partners," by an index of the dollar's value against 15 major currencies. (New York Times, June 19, 1983). A study by USDA economists shows the growing strength of the dollar alone over the last two years has reduced U.S. farm exports by about $3 billion. Also, Department of Commerce data show that the decline in net exports from the U.S. has been a major factor dragging down the economy over the past three years.

Cotton continues to lead the list of products California is sending abroad. Grapes (including table grapes, raisins, wine, juice, and canned products) have risen into the number two position ahead of almonds, wheat, oranges, and rice. All of these leading California products registered declines in export value between 1981 and 1982.

Among California's 25 leading agricultural exports, only five showed gains in 1982; lettuce, celery, broccoli, strawberries, and beef cattle and products. A year of better prices for vegetables and berries and a regaining of the market for hides and tallow accounted for the good export performance of these products.

Avocados were displaced from the list of leading California exports due to the re-emergence of Israel as a source of supply in the European markets after a 1981 crop failure. This curtailed exports from California to EEC countries, especially France.

Strawberries registered the largest gain in value between 1981 and 1982: the export volume increased only 4% but higher values for early produce shipped to Canada, Japan, and West Germany, and the revival of the Japanese market after being interrupted by the Medfly embargo served to boost the value by 64%.

An estimate by a Congressional Joint Economic Committee economist places 20% of the Gross National Product in the agricultural sector with 23 million U.S. jobs and extensive investment in infrastructure dependent on what our farms and ranches produce. Hence, the decline in agricultural exports affects unemployment and reduces the strength of all sectors of the California economy.

TABLE 2. CALIFORNIA'S AGRICULTURAL EXPORT PROFILE 1982

CALIFORNIA'S AGRICULTURAL EXPORT PROFILE, 1982

Table 2

The importance of international trade to California's ranchers and growers is shown in three ways in Table 2. One measure is the value of exports as a percentage of value of production. This dependence ranges from less than 2% for processing tomatoes, up to 80% for cotton lint. A second measure is California's percentage of total U.S. export value and in 29 products California exports more than half the U.S. total. The third measure is an estimate of how many acres are used to produce the exported products and the total is 2.7 million acres even without allowing acres for livestock products. This is 29% of the estimated cropland harvested in 1982.

Cotton again leads the list with the highest exported percentage of California's major crops. With four out of five bales going abroad, the cotton industry in California is serving the apparel industries of Japan, South Korea, Mainland China, and other Pacific Rim countries. At state average yields, about 1.3 million acres are producing cotton for international markets. Compared to total U.S. exports of medium and long staple cotton, California accounts for half (51.1%) of the nation's sales abroad.

Grape growers are sending one-fifth of their produce abroad if they grow table grapes or raisins, but only 3% of the crushed and canned grapes are destined for overseas markets. Practically all the nation's exported table grapes and 100% of the raisins are grown in California. An estimated 42,650 acres of vineyards would be needed to produce these exports using state average yields.

Almonds continue to be a leading export commodity with about half (48.3%) going into international trade. This comparison is less than industry estimates because of the calendar year basis of this report that compares 1982 calendar year exports with the 1981 production -- a system that differs from the marketing year approach used by the almond industry. About 190,385 acres would be needed to produce the almonds sold abroad in 1982.

In former years, as much as 80% of California's wheat and rice has been sold abroad, but in 1982 wheat was just over half (57.6%) exported and rice dropped to 30.1%. The rice decline is largely due to curtailment of shipments to South Korea during a prolonged contract dispute that has yet to be resolved.

Other California commodities that have more than one-third of the crop going into international trade include: dry beans (36.2%), cottonseed (37.2%), ladino clover seed (78.9%), lemons (40.4%), and prunes (51.8%). Those with between one-fifth and one-third exported include: dates (22.7%), grapefruit (31.2%), oranges (29.8%), tangerines (25.6%), walnuts (23.7%), garlic (23.2%), and onions (22.3%).

California's leadership in the specialty crops is evidenced by the proportion of U.S. exports originating in California. In eleven crops, California produces 100% of U.S. exports and in another eighteen, more than half come from the Golden State's farms and ranches.

TABLE 3. CALIFORNIA'S PRINCIPAL CROP AND LIVESTOCK COMMODITIES ESTIMATED FARM VALUE OF PRODUCTION AND COMPARABLE FARM VALUE OF EXPORTS WITH COMPARISON TO U.S. TOTAL, 1982

1/ 1982 exports compared to 1981 crop due to lag in time of sale after harvest.
2/ Compared to an average of the 1980 and 1981 crops.
N/A Not available due to cutbacks in national commodity estimation.

COMPARISON OF CALIFORNIA'S AGRICULTURAL PRODUCTION WITH ESTIMATED EXPORTS

Table 3

Working with quantities of exports rather than the declared value at the port of embarkation as in Table 1, the farmgate value of California's agricultural exports is shown in Table 3. This farm level value is compared to total state production as estimated by the California Crop and Livestock Reporting Service. State average annual prices are used in arriving at the farm level value. Since exports of some commodities tend to be selected for their quality and ability to command high prices in foreign markets, this valuation is probably underestimated. A comparison of California to U.S. exports is computed using the same method: valuing exported quantities at national average farmgate prices. The percentage of California products going into international trade equals or exceeds the U.S. percentage in 70% of the listed commodities.

Calendar year export data presents problems when comparisons are made to a harvest period or marketing year that does not coincide with the calendar year. In noted cases, the comparison has been made with the previous calendar year's crop since considerable delay is encountered in shipping products harvested late in the year.

FIELD CROPS:

Cotton continues its heavy dependence (80%) on international trade. The value of California's cotton exports declined by 6% between 1981 and 1982 even though the volume increased by 12.5%. Lower prices created this situation: More bales were sold but they generated a lower total income. The worldwide decline in economic activity and competition from other suppliers were among the causal factors.

The decline of rice crop exports from 56.4% in 1981 to 30.1% in 1982, is a result of South Korean market contract conflicts and delayed deliveries. The decline in wheat exports closely parallels the lower production: even with a 31% decrease in value,the proportion of the crop exported is estimated at 57.6%, a change of only 1% from 1982.

FRUIT AND NUT CROPS:

Grapes and grape products have become the leading export among the many fruits and nuts produced in California. Table grape exports remained at the same tonnage level as 1981 but when compared to a considerably increased total crop, the proportion exported dropped from 30.1% to 21.5%. Raisin export tonnage was lower due to increasing competition from Greece, now a member of the EEC and enjoying the benefits of the Common Agricultural Policy and reduced barriers to entry in European markets. Wine exports also were reduced having been faced with a strengthening dollar and sluggish economic conditions.

Citrus continues as a well known California product abroad. Although the total number of boxes exported in 1982 fell short of 1981, the total value increased by nearly half (48.6%). Tangerines are a small part of the citrus volume (1.3%) but they are gaining quickly as an export.

Avocados dropped dramatically (-62% in export value) showing the results of sharply lower prices and the return of Israel to the European market after a particularly poor crop year in 1981.

VEGETABLE CROPS:

Vegetable exports in 1982 maintained volume levels similar to those experienced in 1981. With higher prices prevailing throughout the year, this led to increases in value of exports: a bright segment in the general decline of agricultural exports. Potatoes recorded the most significant gains with increased sales to Canada accounting for most of the difference. The share of lettuce production exported remains at the same (6-7%) level while the proportion of processed tomatoes declined to less than 2%.

LIVESTOCK AND POULTRY:

Estimating the quantity and farm value of livestock and livestock product exports is complicated by the variety of products involved, and the valuations assigned to diary products donated to foreign nutrition programs from U.S. government stockpiles.

Turkey product exports continue to increase as foreign markets develop appreciation for these processed specialty items. Chicken exports have fallen due to strong price competition from Brazil and France. Both subsidies and the stronger dollar have made it difficult for U.S. producers to meet the prices offered to Middle Eastern and Far Eastern buyers.

CHANGES OVER FIVE YEARS

TABLE 4

Changes in value of California's agricultural exports for the years 1978-1982 are shown in Table 4. The increase in total value over the five years is 39%, a measure that has been nearly halved by the sharp drop in 1982. Although lemons show a decline and cottonseed registered no change, all the remaining commodities increased with the range running from peaches (+1%) to wheat (+118%). With exports dropping in 1982, the peak for most commodities was in 1981.

CALIFORNIA'S SHARE OF THE NATION'S AGRICULTURAL EXPORTS

Table 5

California's estimated agricultural exports for calendar year 1982 are presented in Table 5 on an individual item basis. U.S. total agricultural exports of each item are also shown, and the share of the nation's exports provided by California is calculated using this data. Estimated values shown are based on port declarations and include freight, insurance, and port charges. These values are notably different from the farmgate values shown in Table 3.

Using these port values, California exports about one in every ten dollars of total U.S. agricultural exports. Among the listed commodity groups, California is providing more than 75 percent of the fruits and nuts and over half the vegetables, flowers, and berries. Because corn, soybeans, oilseed products, and tobacco are not among California's principal crops, the percentage of total U.S. agricultural exports is reduced.

This estimation of California's exports considers the amounts being shipped through California's three port districts, the U.S. total exports of each commodity, the California share in the national production of that commodity, and opinions and information from commodity traders and exporters. Additional information was obtained on fruit and vegetable shipments to Canada, and various U.S. government publications were consulted.

Each selected commodity was individually studied, and for some that are grown only in California (almonds, apricots, figs, dates, raisins, olives, prunes, walnuts, garlic, and ladino clover seed), the national export data are immediately applicable. For others, modifications of the port data were arrived at through the summarization of the individual pieces of information obtained from a wide variety of information sources. (See list on Page 2.)

Only when California grown products are not easily identifiable (hides and skins, tallow, meats, and poultry) is the California share of U.S. production used as a major factor in estimating the amount exported originating in California. This system is also used to estimate the "all other" category. The commodities not listed in Table 5 were divided into 14 groups following the pattern appearing in "Foreign Agricultural Trade of the United States, March/April 1983." California's share of each category was calculated from the totals in Table 14, pp. 58-67 and applied to the sum of values of the "all other" commodities in each classified group. For example, corn for grain, rye, oats, and sorghum for grain were classified as feed grains and U.S. total exports were multiplied by .0105, the calculated factor for California's share of feed grains. The sum of these calculations became the "all other" total and represents 16 percent of the total of California's estimated agricultural exports.

INTRODUCTION: In order to reduce the cost of publication and distribution of agricultural export data and at the same time expand the amount of information available to those who need it, this Statistical Appendix has been separated from the basic annual export data bulletin. It contains the details of destinations of agricultural exports and a list of products not included in the individual commodity estimates shown in Table 5 of the basic bulletin.

Table 6 shows commodity destinations by country and includes U.S. totals and the sum of the three California port districts. No further refinement has been attempted so the reader will need to apply his or her knowledge of the commodity's production pattern to evaluate the port district data. Many of California's agricultural exports are sent primarily through California ports and little or no allowance needs to be made for other states' production. Other products become somewhat obscured by being combined with other states' products or being sent by rail or truck to east coast ports. Products that move to Canada will not be recorded in the California port district data and for those interested primarily in this market, it is recommended that further information be obtained from the Federal-State Market News Service and Agriculture Canada. (See list of information sources in Annual Bulletin.)

Table 7 shows quantity and value of agricultural commodities going to each of 25 countries. The selection of destinations was based on total U.S. market for California's agricultural products. Further similar information for other countries is available on request. Air and sea shipments are shown in this table. Since the transport data is based on gross weight, the total of the modes of transport may exceed the commodity total that is based on net weight of product.

A final Table 8 lists the products that are not treated individually in Table 5. Commodities not grown in California have been removed so this list does not coincide with similar U.S. total lists published by the Foreign Agricultural Service of the U.S. Department of Agriculture.

Data preparation has been done directly from computer tapes purchased from the Department of Commerce. Comments on the form and the usefulness of making this data available will be welcomed.

Prepared by:

Mark Woerner
Assistant Agricultural Economist

July 1983

NOTES TO THE STATISTICAL APPENDIX

SOURCE: The tables in this appendix were prepared from data extracted from the U.S. Department of Commerce Data Tape EA622, "U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation."

Table 6: "Agricultural Exports: U.S. and California Port District Totals" summarizes data for 1982 exports of 140 agricultural products by destination. Pistachio exports are detailed for the first time this year.

1. "California Ports Quantity" is net units of product at the port of exportation.

2. Countries with purchases of less than $5,000 of a specific commodity are totaled and included as "Other."

3. The sum of all individual country values for a commodity may differ from that presented under "Total" due to rounding.

4. Statistics for California port districts should be applied carefully since value and quantity for products shipped from California ports could include production originating in other states.

Table 7: "1982 Annual Exports by Country" details exports to 25 countries, selected by the total value of their U.S. purchases of 400 selected agricultural products.

1. Individual commodities are ranked within each country by the total U.S. purchase value of the commodity.

2. "U.S. Total Quantity" and "California Ports Quantity" are net quantity at the port of exportation.

3. "Vessel Quantity" and "Air Quantity" are gross weights at the port of exportation, and may total to more than "U.S. Total Quantity" or "California Ports Quantity."

Table 8: Other Agricultural Commodities Exported Thru U.S. and California Port Districts provide supplementary data for the commodities not included in Table 5.

1. A modified production share approach was used in calculating the contribution of these commodities to California's agricultural exports, as explained in the introduction to Table 5.
